ADASH141 – 5060329433946. Lenovo Miix 700 protective folio case in gunmetal grey cotton with red lining

ADASH142 – 5060329433953. Lenovo Miix 700 protective folio case in black with red lining

Installation instructions

The armourdog® Lenovo Miix 700 protective case has been designed to offer exceptional protection for your tablet in a stylish and innovative design.

To install your Miix 700 into the case, open the Velcro securing strap at the top of the internal frame and remove the protective inner foam piece. Separate the keyboard from your Miix 700 and slide the tablet in from the top of the frame before securing the Velcro section back into place. Make sure the Miix 700 is firmly in place and the Velcro strap is holding it tightly in place.

You may notice the inner frame looks like it doesn't have a close fit along the sides of the tablet, but this is perfectly normal at this stage. The frame is made from a tough polyurethane which needs to form and 'settle' along the tablet edges. Click the keyboard into place and fully close the case. Leave the case closed with the tablet and keyboard in place for a while and the inner frame will settle into place.

There is a recess on the front of the case and elastic strap to hold the stylus in place. Alternatively you can still use the standard Lenovo USB clip along the side. The case can be use with or without keyboard attached to the tablet.

armourdog®
