

LocPad accessories installation guide

This guide covers installation of three LocPad accessories: The rotating base, landscape / portrait mount, and screw mount base. These accessories allow the LocPad to be installed and used in various, innovative ways without spoiling the stylish design of our bestselling tablet security enclosure.

Rotating base install guide

The LocPad rotating base is supplied with two sets of screws: Long, double threaded screws to attach the base to the mounting surface and a shorter set of screws to secure the LocPad neck to the rotating base. Start the installation process by marking up the outer screw positions with the surface and drilling the surface accordingly. Attach the LocPad neck to the base using the supplied shorter screws and the inner holes before screwing the entire assembly to the mounting surface with the double threaded screws. Make sure the power cable is passed through the hole underneath and threaded through the cable outlet channel in the base.

Landscape / portrait mount install guide

Labels for the landscape/portrait mount diagram: 'Screws to attach to enclosure' (shorter screws), 'Inner holes to attach to pole' (longer screws).

Outer holes to align with enclosure
Screws for LocPad pole

The landscape / portrait mount fits between the LocPad neck and the main enclosure to allow the enclosure to be rotated between landscape and portrait positions. The LocPad 'clicks' into position and requires firm rotation to move from one position to the other. The mount is supplied with two sets of screws; a shorter set to attach the mount to the enclosure and a longer set to attach the neck to the mount. Start the install process by attaching the mount to the neck using the inner 4 screw holes and the four longer screws. The enclosure can then be attached to the mount and neck from the inside of the enclosure using the shorter screws. You will notice there are four screw holes on the rear of the enclosure in a wider pattern.. Align the mount with these holes.

Screw mount base install guide

The screw mount base allows you to secure the LocPad to a wall or desk without having to drill all the way through the surface to the other side. To install the base, slide the base cover onto the LocPad mounting tube before screwing the LocPad neck to the 4 inner screw holes in the base using the screws supplied. Feed the power cable through the power outlet cut-out in the base before using the supplied self tapping screws to fix the base to your surface via the outer 4 screw holes. Lastly, slide the base cover onto the base to hide the screw heads.
